Power Cycling Routers

1. Locate your WiFi router. First ensure there is power to the unit by making note of active LEDs.

2. Turn your WiFi router off at the power point. Ensure it is off by making note of any LEDs that are no longer present. If it is connected to a power board, turn the power board off at the power point. Leave your router powered off for 60 seconds.

3. Turn off any wireless devices as well during this time.

4. Turn your WiFi router back on at the power point and allow another 60 seconds for it to power on.

5. Turn on your wireless devices during this time.
